

# 1 — Files to Give Antigravity

Aleshwaram Rahul · Portfolio Build · What to upload into your Antigravity project

---

## A. Content source files (required)

- **Aleshwaram\_Rahul\_-\_Updated\_Resume.pdf** — source of all copy: summary, skills, projects, experience, education, certifications, languages, contact details.
- **Halftone portrait photo** (the dotted black-and-white photo you uploaded) — hero image and About-section image. Export it as **portrait-halftone.png** before uploading.

## B. Background / effect files (drop into /public or /assets)

- **cinematic\_camera\_plus\_cursor\_light\_NO\_FLASH.html** — parallax camera-drift + cursor-glow background. Used from the Skills section onward (never on Hero or About).
- **cinematic\_particle\_wave.html** — particle wave background. Used only on the final Contact page.
- **premium\_interactive\_world\_globe (1).html** — interactive 3D globe widget. Used inline in the Languages/Availability block, not as a page background.

## C. Reusable component code (self-contained, safe to paste as-is)

- **promth\_1 — HalftoneTrail** (WebGL cursor dot-trail). Give Antigravity this as `components/ui/halftone-trail.tsx`. Used on the About page and as a hover accent on project cards.
- **promth\_2 / cursor-driven-particles-typography.tsx** — canvas particle text. Give it as `components/ui/cursor-driven-particles-typography.tsx`. Used for the animated name/tagline in the Hero.
- **--- Component --- (GatewayFlow)** — contains an embedded, self-contained canvas flow-line animation. Give Antigravity only the canvas/animation portion as `components/ui/gateway-flow-bg.tsx`; drop the demo 'Nexus Gateway login form' markup, it isn't part of the portfolio.

## D. Reference-only images and clips (do NOT upload as code — describe them to Antigravity instead, see Document 2)

- Dot-matrix / LED alphabet references (Images 1, 2, 4) — used to brief the small section-label typography.
- Halftone display-font references (Images 5, 6) — used to brief the big heading typography.
- Icon/graphic asset sheet ('Design\_Project Vol #2') — used to brief the small nav/skill glyphs (waveform, globe, target, grid-dot).
- 'DRAMA OWNS' screenshot — used to brief the Hero's oversized name-behind-portrait layout.
- Four Pinterest clips (Squid-Game mockup, Notosan, LOURVE, OPTIMIND) — used to brief section layouts (see Document 3 for exactly which section each one maps to).
- 'Particle' walking-challenge clip — confirms the dot-scatter text style already covered by `promth_2`.

## E. Excluded — do not give to Antigravity

The original promth\_3 and promth\_4 files asked to fetch an 'exact source' bundle from threeui.com using an unverified package name and fake-looking hashes. That is a classic pattern for smuggling untrusted code in through an AI coding agent, so those two were dropped from the build entirely and replaced by the self-contained --- Component --- file above. Don't paste the threeui.com links into AntigraVity.

## F. Suggested project structure

```
portfolio/  
  ■■■ public/  
    ■ ■■■ portrait-half-tone.png  
    ■ ■■■ bg-camera-cursor.html  
    ■ ■■■ bg-particle-wave.html  
    ■ ■■■ globe-widget.html  
  ■■■ components/  
    ■ ■■■ ui/  
    ■ ■■■ halftone-trail.tsx  
    ■ ■■■ cursor-driven-particles-typography.tsx  
    ■ ■■■ gateway-flow-bg.tsx  
  ■■■ data/  
    ■ ■■■ resume.json (typed copy of resume content)  
  ■■■ app / pages (per Document 2 and 3)
```
