

2 — Prompt for Antigravity

Aleshwaram Rahul · Portfolio Build · Master prompt + step-by-step version

How to use this document

Section A is one master prompt — paste it in a single message once all files from Document 1 are uploaded to the project. Section B breaks the same build into 8 smaller prompts if you'd rather review each part as it's built (recommended if this is your first time driving Antigravity on a multi-section site).

A. Total prompt (single message)

Build a single-page, scroll-based developer portfolio for Aleshwaram Rahul (Software Developer — Java/Spring Boot + Node.js/React full-stack) using the files I've uploaded. Follow this exactly:

PALETTE — strictly achromatic, no colour anywhere:

Whites: #FFFFFF, #F5F5F5, #F2F2F2, #EDED, #E8E8E8

Blacks: #000000, #0D0D0D, #1A1A1A, #262626, #2B2B2B

Base = #000000 background, #1A1A1A card surfaces, #FFFFFF / #E8E8E8 text.

TYPOGRAPHY:

- Big display headings: bold sans, letters built from a dot/halftone texture (radial-gradient dot grid clipped to text, denser toward the centre of each glyph, fading at the edges) — brief: halftone display font reference sheets provided.
- Small section labels ("01 / About", "02 / Skills" ...): dot-matrix / LED style, tracked out, uppercase — brief: dot-matrix font sheets provided.
- Body copy: clean sans-serif (Inter), thin weight, high line-height.
- Section intros next to the portrait: elegant serif (see LOURVE reference clip) for a museum-plaque feel.

COMPONENTS (use exactly, do not rewrite the animation logic):

- halftone-trail.tsx on the About section (cursor dot-trail).
- cursor-driven-particles-typography.tsx for the Hero name/tagline.
- gateway-flow-bg.tsx (canvas only, no login form) as the section background from Skills onward.
- bg-camera-cursor.html (parallax + cursor glow) also from Skills onward — layer it, don't replace gateway-flow.
- bg-particle-wave.html on the Contact section only.
- globe-widget.html inline inside the Languages block, not full-bleed.

SECTIONS, IN ORDER (see Document 3 for full copy + layout of each):

1. Hero — oversized name split around the halftone portrait (DRAMA OWNS style), particle-typography tagline, no background video.
2. About — serif intro beside portrait, LOURVE-style thin vertical rule + stacked fact blocks (role, location, experience), halftone cursor trail only, no background video.
3. Skills — OPTIMIND-style 3-column card grid, glowing dot-icon per card, section counter in the corner. Background videos begin here.
4. Projects — bento-grid gallery in laptop-mockup frames (NexusHR, Glowora Skincare, JoyBoyJutsu, Library Management System).
5. Experience & Education — Notosan-style numbered sections, serif

- headline, dash-prefixed detail lines.
6. Languages / Availability – small card holding the interactive globe.
 7. Contact – particle-wave background, name/email/phone/socials, closing CTA.

RULES:

- Single self-contained HTML file (or component tree that compiles to one), responsive, dark-theme only – no light mode.
- Reuse the exact animation code from the uploaded components; only restyle colours/sizing to match the palette above.
- Do not fetch any external component source at build or runtime other than the fonts/scripts already whitelisted in the uploaded HTML files.
- Respect image alt text and add basic SEO meta tags using the resume's name and role.

Ask me before starting if anything above is ambiguous; otherwise build the full page top to bottom.

B. Step-by-step prompts (paste one at a time)

Step 1 — Project setup

Set up the project (Vite/React/TS or plain HTML, whichever this workspace already uses). Add Tailwind. Create the folders from Document 1's structure. Load the resume content into a single data/resume.json file with fields for summary, skills, projects, experience, education, certifications and languages, taken from the uploaded resume PDF.

Step 2 — Global theme

Define the achromatic colour palette (see Document 3, section 'Palette') as CSS variables. Set up the two typography systems: the halftone dot-display heading style and the dot-matrix label style, both as reusable CSS classes / a DotHeading component.

Step 3 — Hero section

Build the Hero: place the halftone portrait centred, the name in an oversized bold sans split left/right around the portrait (DRAMA OWNS reference), and mount cursor-driven-particles-typography.tsx underneath for the role tagline. No background video.

Step 4 — About section

Build About: serif paragraph pulled from the resume's Professional Summary, next to a cropped portrait, LOURVE-style thin vertical divider and 3 stacked fact blocks (role, location, years of coursework). Mount halftone-trail.tsx as the only motion here.

Step 5 — Skills section

Build Skills as a 3-column card grid (OPTIMIND reference) from the resume's Technical Skills list, grouped into Languages, Backend & Automation, Frontend, Databases & Media, Developer Tools. Mount gateway-flow-bg.tsx and bg-camera-cursor.html layered as the background from this section down to Contact.

Step 6 — Projects section

Build a bento-grid gallery (INSIDE/Squid-Game reference) with one laptop-mockup frame per project: NexusHR, Glowora Skincare, JoyBoyJutsu, Library Management System — pull the bullet points from the resume for each card's description.

Step 7 — Experience, Education, Languages

Build Experience and Education as Notosan-style numbered sections (serif headline, dash detail lines) from the resume. Add a small Languages card and mount globe-widget.html inline inside it (English, Telugu, Hindi).

Step 8 — Contact + polish

Build the Contact section with bg-particle-wave.html as background, contact details from the resume header, and social links. Then do a full responsive pass and check every background only appears where Document 3 specifies.
